Gantt diagrams

A Gantt chart is a type of bar chart, first developed by Karol Adamiecki in 1896, and independently by Henry Gantt in the 1910s, that illustrates a project schedule and the amount of time it would take for any one project to finish. Gantt charts illustrate number of days between the start and finish dates of the terminal elements and summary elements of a project.

A note to users

Gantt Charts will record each scheduled task as one continuous bar that extends from the left to the right. The x axis represents time and the y records the different tasks and the order in which they are to be completed.

It is important to remember that when a date, day, or collection of dates specific to a task are "excluded", the Gantt Chart will accommodate those changes by extending an equal number of days, towards the right, not by creating a gap inside the task. As shown here

Mermaid Configuration

```

1 {
2   "theme": "default"
3 }

```

Powered by mermaid

8.4.8

A Gantt chart is useful for tracking the amount of time it would take before a project is finished, but it can also be used to graphically represent "non-working days", with a few tweaks.

Mermaid can render Gantt diagrams as SVG, PNG or a Markdown link that can be pasted into docs.

Code:

```

gantt
    title A Gantt Diagram
    dateFormat YYYY-MM-DD
    section Section
        A task      :a1, 2014-01-01, 30d
        Another task :after a1, 20d
    section Another
        Task in Another :2014-01-12, 12d
        another task    :24d

```

⌘ + Enter | [Run ▶](#)

A Gantt Diagram

Syntax

Code:

Adding GANTT diagram functionality to mermaid

Tasks are by default sequential. A task start date defaults to the end date of the preceding task.

A colon, `:`, separates the task title from its metadata. Metadata items are separated by a comma, `,`. Valid tags are `active`, `done`, `crit`, and `milestone`. Tags are optional, but if used, they must be specified first. After processing the tags, the remaining metadata items are interpreted as follows:

1. If a single item is specified, it determines when the task ends. It can either be a specific date/time or a duration. If a duration is specified, it is added to the start date of the task to determine the end date of the task, taking into account any exclusions.
2. If two items are specified, the last item is interpreted as in the previous case. The first item can either specify an explicit start date/time (in the format specified by `dateFormat`) or reference another task using `after <otherTaskID> [[otherTaskID2 [otherTaskID3]]...]`. In the latter case, the start date of the task will be set according to the latest end date of any referenced task.

3. If three items are specified, the last two will be interpreted as in the previous case. The first item will denote the ID of the task, which can be referenced using the **later <taskID>** syntax.

Metadata syntax	Start date	End date	ID
<taskID>, <startDate>, <endDate>	startdate as interpreted using dateformat	endDate as interpreted using dateformat	taskID
<taskID>, <startDate>, <length>	startdate as interpreted using dateformat	Start date + length	taskID
<taskID>, after <otherTaskId>, <endDate>	End date of previously specified task otherTaskID	endDate as interpreted using dateformat	taskID
<taskID>, after <otherTaskId>, <length>	End date of previously specified task otherTaskID	Start date + length	taskID
<taskID>, <startDate>, until <otherTaskId>	startdate as interpreted using dateformat	Start date of previously specified task otherTaskID	taskID
<taskID>, after <otherTaskId>, until <otherTaskId>	End date of previously specified task otherTaskID	Start date of previously specified task otherTaskID	taskID
<startDate>, <endDate>	startdate as interpreted using dateformat	enddate as interpreted using dateformat	n/a
<startDate>, <length>	startdate as interpreted using dateformat	Start date + length	n/a
after <otherTaskId>, <endDate>	End date of previously specified task otherTaskID	enddate as interpreted using dateformat	n/a
after <otherTaskId>, <length>	End date of previously specified task otherTaskID	Start date + length	n/a

Metadata syntax	Start date	End date	ID
<code><startDate>, until <otherTaskId></code>	<code>startdate</code> as interpreted using <code>dateformat</code>	Start date of previously specified task <code>otherTaskID</code>	n/a
<code>after <otherTaskId>, until <otherTaskId></code>	End date of previously specified task <code>otherTaskID</code>	Start date of previously specified task <code>otherTaskID</code>	n/a
<code><endDate></code>	End date of preceding task	<code>enddate</code> as interpreted using <code>dateformat</code>	n/a
<code><length></code>	End date of preceding task	Start date + <code>length</code>	n/a
<code>until <otherTaskId></code>	End date of preceding task	Start date of previously specified task <code>otherTaskID</code>	n/a

INFO

Support for keyword `until` was added in (v10.9.0+). This can be used to define a task which is running until some other specific task or milestone starts.

Duration format

When specifying a `<length>`, use a number followed by one of these unit suffixes:

Unit	Suffix	Example
Milliseconds	<code>ms</code>	<code>500ms</code>
Seconds	<code>s</code>	<code>30s</code>
Minutes	<code>m</code>	<code>30m</code>
Hours	<code>h</code>	<code>4h</code>
Days	<code>d</code>	<code>3d</code>
Weeks	<code>w</code>	<code>2w</code>
Months	<code>M</code>	<code>1M</code>
Years	<code>y</code>	<code>1y</code>

Decimal values are also supported (e.g., **1.5d**). Invalid duration tokens (e.g., **3dX**) will be ignored and the task will default to zero duration.

For simplicity, the table does not show the use of multiple tasks listed with the **after** keyword. Here is an example of how to use it and how it's interpreted:

Code:

gantt

```
apple :a, 2017-07-20, 1w
banana :crit, b, 2017-07-23, 1d
cherry :active, c, after b a, 1d
kiwi :d, 2017-07-20, until b c
```

mermaid

⌘ + Enter | [Run ▶](#)

Title

The **title** is an *optional* string to be displayed at the top of the Gantt chart to describe the chart as a whole.

Excludes

The **excludes** is an *optional* attribute that accepts specific dates in YYYY-MM-DD format, days of the week ("sunday") or "weekends", but not the word "weekdays". These date will be marked on the graph, and be excluded from the duration calculation of tasks. Meaning that if there are excluded dates during a task interval, the number of 'skipped' days will be added to the end of the task to ensure the duration is as specified in the code.

Weekend (v\11.0.0+)

When excluding weekends, it is possible to configure the weekends to be either Friday and Saturday or Saturday and Sunday. By default weekends are Saturday and

Sunday. To define the weekend start day, there is an *optional* attribute **weekend** that can be added in a new line followed by either **friday** or **saturday** .

Code:

mermaid

gantt

```

title A Gantt Diagram Excluding Fri - Sat weekends
dateFormat YYYY-MM-DD
excludes weekends
weekend friday
section Section
    A task          :a1, 2024-01-01, 30d
    Another task    :after a1, 20d

```

⌘ + Enter | **Run** ▶

Section statements

You can divide the chart into various sections, for example to separate different parts of a project like development and documentation.

To do so, start a line with the **section** keyword and give it a name. (Note that unlike with the **title for the entire chart**, this name is *required*).

Milestones

You can add milestones to the diagrams. Milestones differ from tasks as they represent a single instant in time and are identified by the keyword **milestone** .

Below is an example on how to use milestones. As you may notice, the exact location of the milestone is determined by the initial date for the milestone and the "duration" of the task this way: *initial date+duration/2*.

Code:

mermaid

gantt

```

dateFormat HH:mm

```

```
axisFormat %H:%M
```

```
Initial milestone : milestone, m1, 17:49, 2m
```

```
Task A : 10m
```

```
Task B : 5m
```

```
Final milestone : milestone, m2, 18:08, 4m
```

⌘ + Enter | **Run** ▶

Vertical Markers

The **vert** keyword lets you add vertical lines to your Gantt chart, making it easy to highlight important dates like deadlines, events, or checkpoints. These markers extend across the entire chart and are positioned based on the date you provide. Unlike milestones, vertical markers don't take up a row. They're purely visual reference points that help break up the timeline and make important moments easier to spot.

Code:

mermaid

```
gantt
```

```
dateFormat HH:mm
```

```
axisFormat %H:%M
```

```
Initial vert : vert, v1, 17:30, 2m
```

```
Task A : 3m
```

```
Task B : 8m
```

```
Final vert : vert, v2, 17:58, 4m
```

⌘ + Enter | **Run** ▶

Setting dates

`dateFormat` defines the format of the date **input** of your gantt elements. How these dates are represented in the rendered chart **output** are defined by `axisFormat` .

Input date format

The default input date format is `YYYY-MM-DD` . You can define your custom `dateFormat` .

```
dateFormat YYYY-MM-DD
```

markdown

The following formatting options are supported:

Input	Example	Description
<code>YYYY</code>	2014	4 digit year
<code>YY</code>	14	2 digit year
<code>Q</code>	1..4	Quarter of year. Sets month to first month in quarter.
<code>M MM</code>	1..12	Month number
<code>MMM MMMM</code>	January..Dec	Month name in locale set by <code>dayjs.locale()</code>
<code>D DD</code>	1..31	Day of month
<code>Do</code>	1st..31st	Day of month with ordinal
<code>DDD DDDD</code>	1..365	Day of year
<code>X</code>	1410715640.579	Unix timestamp
<code>x</code>	1410715640579	Unix ms timestamp
<code>H HH</code>	0..23	24 hour time
<code>h hh</code>	1..12	12 hour time used with <code>a A</code> .
<code>a A</code>	am pm	Post or ante meridiem
<code>m mm</code>	0..59	Minutes
<code>s ss</code>	0..59	Seconds

Input	Example	Description
S	0..9	Tenths of a second
SS	0..99	Hundreds of a second
SSS	0..999	Thousandths of a second
Z ZZ	+12:00	Offset from UTC as +-HH:mm, +-HHmm, or Z

More info in: <https://day.js.org/docs/en/parse/string-format/>

Output date format on the axis

The default output date format is `YYYY-MM-DD` . You can define your custom `axisFormat` , like `2020-Q1` for the first quarter of the year 2020.

markdown

```
axisFormat %Y-%m-%d
```

The following formatting strings are supported:

Format	Definition
%a	abbreviated weekday name
%A	full weekday name
%b	abbreviated month name
%B	full month name
%c	date and time, as "%a %b %e %H:%M:%S %Y"
%d	zero-padded day of the month as a decimal number [01,31]
%e	space-padded day of the month as a decimal number [1,31]; equivalent to %_d
%H	hour (24-hour clock) as a decimal number [00,23]
%I	hour (12-hour clock) as a decimal number [01,12]
%j	day of the year as a decimal number [001,366]
%m	month as a decimal number [01,12]
%M	minute as a decimal number [00,59]
%L	milliseconds as a decimal number [000, 999]

Format	Definition
%p	either AM or PM
%S	second as a decimal number [00,61]
%U	week number of the year (Sunday as the first day of the week) as a decimal number [00,53]
%w	weekday as a decimal number [0(Sunday),6]
%W	week number of the year (Monday as the first day of the week) as a decimal number [00,53]
%x	date, as "%m/%d/%Y"
%X	time, as "%H:%M:%S"
%y	year without century as a decimal number [00,99]
%Y	year with century as a decimal number
%Z	time zone offset, such as "-0700"
%%	a literal "%" character

More info in: https://github.com/d3/d3-time-format/tree/v4.0.0#locale_format

Axis ticks (v10.3.0+)

The default output ticks are auto. You can custom your `tickInterval` , like `1day` or `1week` .

```
tickInterval 1day
```

markdown

The pattern is:

```
/^([1-9][0-9]*) (millisecond|second|minute|hour|day|week|month)$/;
```

javascript

More info in: https://github.com/d3/d3-time#interval_every

Week-based `tickInterval` s start the week on sunday by default. If you wish to specify another weekday on which the `tickInterval` should start, use the `weekday` option:

Code:

mermaid

```
gantt
  tickInterval 1week
  weekday monday
```

⌘ + Enter | [Run ▶](#)**WARNING**

`millisecond` and `second` support was added in v10.3.0

Output in compact mode

The compact mode allows you to display multiple tasks in the same row. Compact mode can be enabled for a gantt chart by setting the display mode of the graph via preceding YAML settings.

Code:

mermaid

```
---
displayMode: compact
---
gantt
  title A Gantt Diagram
  dateFormat YYYY-MM-DD

  section Section
  A task           :a1, 2014-01-01, 30d
  Another task     :a2, 2014-01-20, 25d
  Another one      :a3, 2014-02-10, 20d
```

⌘ + Enter | [Run ▶](#)

A Gantt Diagram

Comments

Comments can be entered within a gantt chart, which will be ignored by the parser. Comments need to be on their own line and must be prefaced with `%%` (double percent signs). Any text after the start of the comment to the next newline will be treated as a comment, including any diagram syntax.

Code:

```
gantt
    title A Gantt Diagram
    %% This is a comment
    dateFormat YYYY-MM-DD
    section Section
        A task           :a1, 2014-01-01, 30d
        Another task     :after a1, 20d
    section Another
        Task in Another  :2014-01-12, 12d
        another task     :24d
```

mermaid

⌘ + Enter | [Run ▶](#)

A Gantt Diagram

Styling

Styling of the Gantt diagram is done by defining a number of CSS classes. During rendering, these classes are extracted from the file located at `src/diagrams/gantt/styles.js`

Classes used

Class	Description
<code>grid.tick</code>	Styling for the Grid Lines
<code>grid.path</code>	Styling for the Grid's borders
<code>.taskText</code>	Task Text Styling
<code>.taskTextOutsideRight</code>	Styling for Task Text that exceeds the activity bar towards the right.
<code>.taskTextOutsideLeft</code>	Styling for Task Text that exceeds the activity bar, towards the left.
<code>todayMarker</code>	Toggle and Styling for the "Today Marker"

Sample stylesheet

CSS

```
.grid .tick {
  stroke: lightgrey;
  opacity: 0.3;
  shape-rendering: crispEdges;
}

.grid path {
  stroke-width: 0;
}

#tag {
  color: white;
  background: #fa283d;
  width: 150px;
  position: absolute;
  display: none;
  padding: 3px 6px;
  margin-left: -80px;
  font-size: 11px;
}

#tag:before {
  border: solid transparent;
```

```
    content: ' ';
    height: 0;
    left: 50%;
    margin-left: -5px;
    position: absolute;
    width: 0;
    border-width: 10px;
    border-bottom-color: #fa283d;
    top: -20px;
}
.taskText {
    fill: white;
    text-anchor: middle;
}
.taskTextOutsideRight {
    fill: black;
    text-anchor: start;
}
.taskTextOutsideLeft {
    fill: black;
    text-anchor: end;
}
```

Today marker

You can style or hide the marker for the current date. To style it, add a value for the `todayMarker` key.

```
todayMarker stroke-width:5px,stroke:#0f0,opacity:0.5
```

To hide the marker, set `todayMarker` to `off`.

```
todayMarker off
```

Configuration

It is possible to adjust the margins for rendering the gantt diagram.

This is done by defining the `ganttConfig` part of the configuration object. How to use the CLI is described in the [mermaidCLI](#) page.

`mermaid.ganttConfig` can be set to a JSON string with config parameters or the corresponding object.

javascript

```
mermaid.ganttConfig = {
  titleTopMargin: 25, // Margin top for the text over the diagram
  barHeight: 20, // The height of the bars in the graph
  barGap: 4, // The margin between the different activities in the gantt
  topPadding: 75, // Margin between title and gantt diagram and between activities
  rightPadding: 75, // The space allocated for the section name to the right
  leftPadding: 75, // The space allocated for the section name to the left
  gridLineStartPadding: 10, // Vertical starting position of the grid line
  fontSize: 12, // Font size
  sectionFontSize: 24, // Font size for sections
  numberSectionStyles: 1, // The number of alternating section styles
  axisFormat: '%d/%m', // Date/time format of the axis
  tickInterval: '1week', // Axis ticks
  topAxis: true, // When this flag is set, date labels will be added to the top
  displayMode: 'compact', // Turns compact mode on
  weekday: 'sunday', // On which day a week-based interval should start
};
```

Possible configuration params:

Param	Description	Default value
mirrorActor	Turns on/off the rendering of actors below the diagram as well as above it	false
bottomMarginAdj	Adjusts how far down the graph ended. Wide borders styles with css could generate unwanted clipping which is why this config param exists.	1

Interaction

It is possible to bind a click event to a task. The click can lead to either a javascript callback or to a link which will be opened in the current browser tab. **Note:** This functionality is disabled when using `securityLevel='strict'` and enabled when using `securityLevel='loose'`.

```
click taskId call callback(arguments)
click taskId href URL
```

- taskId is the id of the task
- callback is the name of a javascript function defined on the page displaying the graph, the function will be called with the taskId as the parameter if no other arguments are specified.

Beginner's tip—a full example using interactive links in an HTML context:

html

```
<body>
  <pre class="mermaid">
    gantt
      dateFormat YYYY-MM-DD

      section Clickable
        Visit mermaidjs           :active, cl1, 2014-01-07, 3d
        Print arguments           :cl2, after cl1, 3d
        Print task                :cl3, after cl2, 3d

        click cl1 href "https://mermaidjs.github.io/"
        click cl2 call printArguments("test1", "test2", test3)
        click cl3 call printTask()
  </pre>

  <script>
    const printArguments = function (arg1, arg2, arg3) {
      alert('printArguments called with arguments: ' + arg1 + ', ' + arg2
    );
    };
    const printTask = function (taskId) {
      alert('taskId: ' + taskId);
    };
    const config = {
      startOnLoad: true,
      securityLevel: 'loose',
    };
  </script>
```

```
mermaid.initialize(config);  
</script>  
</body>
```

Examples

Bar chart (using gantt chart)

Code:

```
gantt  
    title Git Issues - days since last update  
    dateFormat X  
    axisFormat %s  
    section Issue19062  
    71    : 0, 71  
    section Issue19401  
    36    : 0, 36  
    section Issue193  
    34    : 0, 34  
    section Issue7441  
    9     : 0, 9  
    section Issue1300  
    5     : 0, 5
```

mermaid

⌘ + Enter | [Run](#) ▶

Timeline (with comments, CSS, config in frontmatter)

Code:

```

# Frontmatter config, YAML comments
title: Ignored if specified in chart
displayMode: compact      #gantt specific setting but works at this level
config:
#       theme: forest
#       themeCSS: " #item36 { fill: CadetBlue } "
       themeCSS: " // YAML supports multiline strings using a newline marker
                   #item36 { fill: CadetBlue }           \n

                   // Custom marker workaround CSS from forum (below)      \n
                   rect[id^=workaround] { height: calc(100% - 50px) ; transform:
                   text[id^=workaround] { fill: red; y: 100%; font-size: 15px;}
"

       gantt:
           useWidth: 400
           rightPadding: 0
           topAxis: true #false
           numberSectionStyles: 2

```

gantt

```

title Timeline - Gantt Sampler
