## Ishikawa diagram (v11.12.3+)

Ishikawa diagrams are used to represent causes of a specific event (or a problem). They are also known as fishbone diagrams, herringbone diagrams or cause-and-effect diagrams. The diagram resembles a fish skeleton, with the main problem at the head and the causes branching off from the spine.

### WARNING

This is a new diagram type in Mermaid. Its syntax may evolve in future versions.

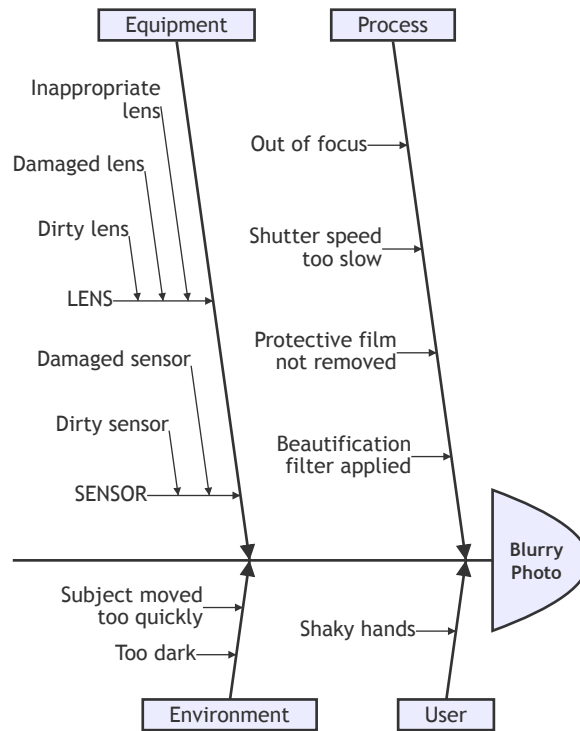

## # Syntax

Code:

```
graph LR
    A[Blurry Photo] --> B[Process]
    A --> C[User]
    A --> D[Equipment]
    A --> E[Environment]
    B --> B1[Out of focus]
    B --> B2[Shutter speed too slow]
    B --> B3[Protective film not removed]
    B --> B4[Beautification filter applied]
    C --> C1[Shaky hands]
    D --> D1[LENS]
    D --> D2[SENSOR]
    D1 --> D1_1[Inappropriate lens]
    D1 --> D1_2[Damaged lens]
    D1 --> D1_3[Dirty lens]
    D2 --> D2_1[Damaged sensor]
    D2 --> D2_2[Dirty sensor]
    E --> E1[Subject moved too quickly]
    E --> E2[Too dark]
```

mermaid

⌘ + Enter | [Run ▶](#)

- The first line is the event (problem) of the diagram.
- Subsequent lines are causes of the event.
- "Fishbone" structure is indicated by indentation.
